Education

BEng Software Engineering (1st Class Honours)

Sep 2022 – May 2025

Sheffield Hallam University

Sheffield, UK

Relevant Coursework: Machine Learning, Software Architecture, Data Science, Web Technologies, Databases

Experience

Scrapays - Recycling Tech Startup

Feb 2026 – Present

Junior Software Engineer

- Built a material acceptance system using NestJS, GraphQL, and React (TypeScript), allowing processors to approve or reject materials and automatically recalculate supply weights.
- Worked closely with a senior engineer to translate product requirements into production code, discussing design trade-offs and implementation details.
- Contributed to features used in live operational workflows, focusing on clean, maintainable code and reliable APIs.

Sheffield Hallam University

Jan 2025 – May 2025

Junior Software Instructor & Student Mentor

- Mentored 40+ students on API development, Git workflows, and collaborative engineering practices.
- Reviewed student code, providing clear, constructive feedback to improve correctness and readability.
- Communicated technical concepts clearly to both technical and non-technical audiences.
- Encouraged structured problem-solving, testing, and documentation standards.

Scrapays - Recycling Tech Startup

Jun 2024 – Aug 2024

Software Engineering Intern

- Delivered 7+ full-stack features using TypeScript, React, and Node.js that supported live operational workflows.
- Worked within an existing codebase, debugging APIs, data flows, and integrations across services
- Built and maintained Docker-based development and CI/CD pipelines, improving release reliability and reducing deployment issues.
- Collaborated closely with product, design, and engineering to translate business requirements into technical solutions, discussing trade-offs and risks
- Took ownership of issues end-to-end, balancing speed, code quality, and system stability

Personal Projects

Automated PR Review Assistant - Microservice System (Python, FastAPI, Docker, Redis)

2025

- Built an event-driven backend service to automate GitHub pull-request analysis, focusing on reliability, structured outputs, and cost-aware processing.
- Designed clean API boundaries and asynchronous workflows suitable for integration with AI-powered analysis and internal developer tooling.
- Implemented logging, testing, and CI/CD pipelines to support safe iteration and observability in production.
- Documented system behaviour and edge cases to support future extension and prompt/model integration.

Technical Skills

Engineering Fundamentals: Python, TypeScript, JavaScript, C#, Tailwind CSS, data structures, API design

Backend & Distributed Systems: FastAPI, NestJS, Express, REST APIs, GraphQL, microservices

Data & Analytics Foundations: SQL, PostgreSQL (JSONB), data pipelines, validation (zod), batch processing

DevOps & Cloud: Docker, GitHub Actions (CI/CD), testing (unit & integration), logging, containerised deployments
